## Novel Medicinal Botanical Delivery System Powered by Bees

### Zuf Globus- About us

For over 20 years, Zuf Globus has developed, manufactured and marketed concentrated, beehive-based nutritional supplements. Our products are produced by honeybees, which are fed only botanicals with scientifically validated, targeted health benefits.

### Our unique production process

Honey contains various beneficial minerals and compounds, which can vary depending on the specific botanicals consumed by the bees. We took this natural process further. Instead of flower nectar, which bees usually consume, we feed our bees specially formulated extracts made from botanical herbs, known for their health benefits and listed in the World Health Organization's Pharmacopeia. Each formula was developed for a specific health benefit. The result is bio actively concentrated beehive products with targeted benefits-in fact our herbal honeys have over 1000 bio actives compared to regular honey and are rich in flavonoids.

### Research

Since the establishment of the company, we have been engaged in intensive research and development of the ZUF GLOBUS products, led by the LIFEMEL clinical trials. The trials evaluated the safety of our products and the potential role of LifeMel honey in preventing chemotherapy-hematopoietic toxicities. The clinical trials were published in the Medical Oncology journal & the Journal of Complementary Medicine.

### **SAFETY AND QUALITY CERTIFICATES**

We're committed to quality, safety and purity.
